

Discover 5 Under-the-Radar Stocks  
Set for Potential Multi-Bagger Profits  
As Oil Breaks \$120!

As World Events and Demand for Clean, Reliable Energy Sources Converge ... VC's, Governments and Informed Investors are All Staking their Claims.

What about you?

With U.S. dependency on unreliable and expensive foreign oil (breaking \$120/barrel yesterday), and a growing concern over greenhouse gas emissions ...

... we are seeing an unprecedented, full-throttle effort to bring commercial viability to alternative and clean energy sources.

On the cost side, we're seeing a half-trillion dollars a year, leaving the U.S. economy to buy oil. And this can't be sustained.

This energy crisis is top of mind for government, private enterprise, venture capitalists, media outlets and, of course, the front-runners – scientists and environmentalists.

Even politicians are starting to deal with these very real issues, facing our planet. Imagine that.

But, just as the energy crisis did not get mainstream attention for a LONG time, there are alternative energy companies out there, who have been plugging away, achieving amazing advances toward sustainability and commercial viability ... virtually undetected.

Many of these companies are still under the radar of Wall Street and the financial media. But they won't be for long.

And that's why I'm writing to you today...

I've been tracking alternative energy for several years and am convinced that right now is the time for investors to stake a claim in this lucrative sector ... before it becomes mainstream.

Get in early and sell when the share prices are up. Simple investing 101.

Yet finding these winners is not always easy for individual investors. In fact, without a team of good stock research analysts it's nearly impossible.

That's where I can help you.

I want to share with you my latest findings in the alternative energy sector. And I'll offer 5 stocks that I recommend to you today.

## New Stock Research Report:

### Alternative Energy Investing 2008: 5 Top Stocks Set for Profits

I want you to have this report, which analyzes 5 'under the radar' companies in the alternative energy sector that offer potential multi-bagger returns to the fortunate few, who get in early.

Now, I don't want you to rush down to the link to request your copy just yet. Not before you have reason to believe me.

I'm Ian Wyatt, Chief Equity Strategist at Rising Star Stocks. I am an independent analyst, so I'm not compensated by any of the companies I recommend.

Our alternative energy recommendations for 2007 rewarded early investors with returns like these two:

1. Daystar Tech (DSTI): +131% in 5 months.
2. Zoltek Cos. (ZOLT): +107% in 6 months.

### More Rising Star Gains across Many Sectors...

In addition to alternative energy stocks, my readers have consistently enjoyed winners over the years in other sectors, like these Rising Star Stocks recommended portfolio holdings:

True Religion Apparel (NASDAQ: TRLG)	+1,996% in 16 months
Synchronoss (NASDAQ: SNCR)	+508% in 14 months
Nuance Communications (NASDAQ: NUAN)	+284% in 24 months
NutraCea (OTC BB: NTRZ)	+390% in 10 months
Bolt Technology (AMEX: BTJ)	+134% in 13 months
Sigma Designs (NASDAQ: SIGM)	+141% in 26 months
Amtech (NASDAQ: ASYS)	+90% in 9 months

### How We Choose Our Rising Star Stocks ...

Our purpose is to locate small-cap stocks, poised for fundamentals-based growth and double or triple digit returns ...

... before they attract the attention of Wall Street and the financial media and, thereby, drive up prices.

Today, I want you to have our report on 5 Rising Stars in the Alternative Energy Sector, set for potential double or triple digit returns.

Maybe there's room for some 'green' high-growth in your portfolio? The word, "alternative," is really a misnomer – because renewable energy sources are being produced and used NOW.

Before I talk about them, specifically, let me show you how we evaluate every company we cover, so you can appreciate how difficult it was for these alternative energy companies to make the cut.

Attractive Long-Term Valuation	Company has "10-bagger" potential and is in the early stages of long-term growth.
Leader with a Competitive Edge	The company develops revolutionary and cutting edge products. It is innovative and holds unique intellectual property. The company's products or services can be leveraged in several markets.
Undiscovered	Little or no analyst or financial media coverage and the average investor is still unaware of company's growth potential. The company has little or no current institutional ownership.
Micro Capitalization	Market capitalization less than \$250 million, small share count and significant insider ownership.
Movement to Profitability	The company has a clearly defined plan to become profitable in the coming quarters, and will soon be generating positive cash flow through operations. Gross margins continue to improve, even if net income remains negative.

So, as you can see, all of the companies we select MUST be fundamentally sound, or they don't make it.

In this report on Alternative Energy Stocks, you'll learn about...

*Rising Star Stocks solar recommendation should yield double digit returns in the coming months.*

### Company #1: Alternative Energy Rising Stars in Solar and Photovoltaic Technology ...

Americans make up less than 5% of the global population, but use 26% of the world's energy.

And the U.S. is the world's largest emitter of greenhouse gases, considered a major contributor to global warming.

Solar power is one alternative energy source that holds great promise as an abundant and pollutant-free energy source.

Standard & Poor's Equity Research Services states the

solar energy industry will grow 30% annually through 2010. That's a lot of growth.

Last year, President Bush issued the Solar America Initiative (SAI), with the ultimate goal of producing solar energy that's as affordable and reliable as oil and gas. SAI is also creating a favorable environment for big name energy players, like GE, Shell and BP to partner with some of the smaller companies, like the types I cover in my new report.

Many other government-related forces are climbing on board, such as the U.S. Air Force Research Lab. They've invested over \$60 million in one of our Rising Stars for their Solar Cell R&D.

Since 2005, the U.S. government has provided tax credits on all solar systems installed by businesses and homeowners.

In late February, the House voted to extend H.R. 5351, which will provide tax credits another 8 years for commercial and 6 years for residential to further encourage use. The Senate has also just recently adopted this bill.

Every Washington politician knows that, by extending these solar tax credits, they will be viewed favorably by their constituents.

Worldwide, nearly \$2 billion was devoted to Solar R&D and manufacturing expansion in 2007.

And the stock market value of solar energy companies has skyrocketed 4,750% globally between 2003 - 2007

Germany is the world's largest market for photovoltaic solar panels, with annual sales over \$5 billion.

And one of our Rising Stars, featured in this report, will begin turning out low-cost solar cells in the second quarter of 2008.

The Canadian government is also heavily funding R&D and manufacturing of solar cells.

In one of our Stars, analysts have revenues jumping 7,331% in 2008.

We're issuing a "Buy" rating on 3 different solar/PV stocks.

You'll find out exactly who they are and why I'm recommending them in the report.

Department of Energy Says...

"Few power-generation technologies have as little impact on the environment as photovoltaics (PV).

As it quietly generates electricity from light, PV produces no air pollution or hazardous waste.

It doesn't require liquid or gaseous fuels to be transported or combusted. And because its energy source – sunlight – is free and abundant, PV systems can guarantee access to electric power."

As you can see, solar power isn't a far away dream ... it's happening right now. And early investors are

reaping the rewards. What about you?

### Company #2: Alternative Energy Rising Star in Biodiesel ...

The Chinese government has made biodiesel production a top priority, as China is second only to the U.S. in the amount of energy consumed.

Our Rising Star uses renewable resources to produce their biodiesel fuel. With two new facilities scheduled for production in 2008 – 2009, their total annual output will increase another near-20 million gallons.

Energy analysts expect the Chinese diesel market to grow by 45% by 2010. By this time, demand is projected to reach an all-time high of 6 billion gallons.

We are initiating a “Buy” rating with a \$2.50 target price on this rising star.

### Company #3: Alternative Energy Rising Star in Wind Technology ...

Harnessing the power of the wind has been around so long that it's no wonder interest in wind-energy is gaining increased velocity.

Another one of our Rising Star Stocks is a company involved in wind energy, as an alternative power source to help replace fossil fuels and their addictive consequences.

Global wind-power capacity grew a record 30% in 2006, according to a Danish research firm, BTM Consult. They project that investment will reach \$186 billion in this booming sector, over the next 5 years.

And Merrill Lynch predicts that wind power will grow 15-fold over the next 20 years.

The American Wind Energy Association (AWEA) says that only 1% of electricity in the U.S. is currently supplied by wind, yet it has the potential to provide as much as 20% of the nation's electric power.

Our Rising Star in the wind energy sector has racked up orders for \$53 million in turbine and turbine parts in 2007 and received almost \$5 million cash deposit to supply turbines to a South American client.

And, they have an additional \$50 million, plus, in orders from Chinese and European customers.

This company's revenues exploded in 2007 and analysts expect them to grow an additional 150% in 2008.

With this company's leadership position, extensive experience and their ability to forge relationships with

*The fast growing wind energy industry is just one of the many new, commercially viable, clean energy industries Rising Star Stocks tracks.*

energy suppliers and regulators, we think they stand to cash in on this new electric utility sector.

This company, as with all of our Rising Stars, has gone virtually unnoticed by most analysts.

But they have a steady rise in revenues and a good-looking balance sheet, with ample cash.

Given the explosion in revenue and the growth in the wind power sector, we're initiating a "Buy" on this stock.

#### Company #4: Alternative Energy Rising Star in Smart Grid Technology...

One of our Rising Stars is in smart grid technology. The U.S. electric grid will be strained by more than 60% by 2015.

The aging power infrastructure continues to be taxed by increased energy usage, causing energy efficiency to be a key factor.

Gridwise Alliance, a consortium of companies like GE and Constellation Energy Group are working in partnership with the U.S. Department of Energy to address these energy problems.

Smart grid technology allows 'smart' electric meters to communicate with utility providers and track power consumption by the hour.

This enables customers to adjust usage to take advantage of off-peak rates, instead of high-peak rates.

Utilities can use smart grid technology to increase electric capacity, during busy periods ... all without having to buy energy at peak prices on the open market or build additional power plants.

Washington is pushing smart grid technology to help prevent brownouts and blackouts, caused by overburdened grid systems.

This technology will also reduce total energy consumption, curbing carbon emissions and halt global warming.

Smart grid technology is emission-free and touted for its cost efficiency. It's 40% cheaper than building new generators or transmission lines.

Our Rising Star company continues to strike lucrative deals, with demanding utility companies.

And some experts view smart grid technology as the most promising area in all of 'cleantech.'

Revenues in 2008 are expected to double those of 2007 for my Smart Grid company. We believe this stock is undervalued and are issuing a "Buy" rating, with a target price of \$32.00.

#### Company #5: The Secret Company Soon to Be a Household Name...

My last company is so far flying under the radar, but that's soon to change. Every investor interested in profits from the clean energy sector is going to want a piece of this action. And as institutional investors get on board, the share price will have early investors reaping great rewards.

Should You Add These Alternative Energy Stocks to Your Portfolio?

As you've read, all of the companies we analyze for you in this report are currently unknown on Wall Street. But, as you know, that will change very soon.

Their undetected status provides investors a ground-floor opportunity to acquire a position for incredible gains ... before the market uncovers these growth plays and drives up share prices.

### How Can You Find Out About These Rising Stars in the Alternative Energy Sector?

I want to give you my report, covering my recommendations in alternative energy ... as one of many other invaluable reports on some high growth and emerging sectors.

You've got your blue-chips, your 401(k)s and your mutual funds ... now, why not investigate some high-growth, small cap stocks that can deliver outsized gains?

I genuinely see this as an unprecedented opportunity for you.

When the venture capitalists are getting involved, you know it's big.

And, when the U.S. and other countries are investing billions of dollars to fund these companies that I'm recommending to you ... you know you're on to something really BIG!

Don't let this opportunity knock on your door, without opening it. That could be a very costly mistake.

Like you saw in the examples above, my stock recommendations see double and triple digit gains ... across many sectors, including alternative energy.

So, now it's your turn to cash in on profits from the alternative energy sector, as it takes off from interesting science to commercial viable business.

Stay ahead of Wall Street and cash in on these little known stocks that I scour the world to bring you.

I know what this information has meant for me and for my readers. Now, what about you?

If there's room in your portfolio for some micro-cap, high growth stocks, with the potential to be multi-baggers ...

I hope you'll consider discovering who they are today, before Wall Street. And continue to profit from them now and into the future.

In my analytic opinion, they are Rising Stars!
